Profile

Apart from being an AI student, I have strong interest in fields of Cybersecurity, Quantum Computing and Web development. With a love for quantum computing, I am pretty much excited to revolutionize the future of computation and problem solving. Additionally, web development offers me to build decent web applications. I am a proficient coder skilled in various programming languages and technologies, and I am eager to apply my knowledge to solve complex problems.

Education

Amrita Vishwa Vidyapeetham

Bachelor of Engineering

Major in Computer Science Specialization in Artificial Intelligence

Cumulative GPA: **7.3/10**

Relevant Coursework: ML, DL, DBMS, Computer Networks, OS, OOPS, Data Structures and Algorithms.

Kollam, Kerala

Oct 2021- Expected Mar 2025

Narayana Junior College

Higher Secondary Education

Major in MPC (Maths, Physics, Chemistry)

Percentage: 97.5

Vijayawada, AP

July 2019- October 2021

Narayana Olympiad

Primary and Secondary education

Cumulative GPA: 10

Ongole, AP

July 2019

Technical Projects

Flysmart: Flysmart is an Airway management System build with React JS and Express Js. It utilizes Nodejs for backend and postgresSQL for database management. The system streamlines flight operations , bookings and passenger management.

Technologies used : ReactJS, Express, NodeJS, PostgreSQL

Mindcare: MindCare is an AI-powered mental health solution that detects stress levels and provides counseling. It uses React.js, Flask, and TensorFlow for the frontend and backend. The system is trained on emotion recognition datasets FER for facial emotion detection and we have used llama3 as a base LLM and finetuned upon it.

Portfolio: I designed and developed a 3D interactive portfolio website using React.js, Three.js, and GSAP, showcasing my expertise in modern frontend development. The site features smooth animations, dynamic page transitions, and an intuitive, responsive UI to ensure an engaging user experience. Leveraging Three.js, I integrated interactive 3D elements, while GSAP powered seamless motion effects and transitions. [NadeemShaik](#)

Robotics Club website: I developed an interactive website for my college's Robotics Club using React.js and Three.js, providing an engaging platform for students and club members. The website features 3D visual elements, a modern UI, and a responsive design to ensure a seamless experience across devices. It serves as a hub for event updates, project showcases, and club activities, improving accessibility and engagement. [ClubWebsite](#)

Social Outreach Project

AI workshop: Our Community Outreach Project focused on educating school children about the basics of AI. We aimed to not only teach them coding fundamentals but also provide valuable career guidance, sparking their interest in technology and helping them understand potential career paths in the field of AI

Skills

Programming Languages: Java, C, Python, Javascript, Go

Database management systems: MySQL, MongoDB, PostgreSQL

Libraries/Frameworks: Scikit-Learn, Tensorflow, ReactJS, NodeJS, GSAP, Express, Django, Flask

Concepts: Data structures, Object-Oriented-Programming, Operating systems, Linux, Computer networks

Additional abilities:

- Able to work both independently and collaboratively within a team
- Strong analytical skills and effective problem-solving abilities
- Exceptional at managing time and meeting deadlines

Certifications:

- **Ingeni QML for Medical Imaging Course : Ingeni** (*Issued: Jan 2025*)
Learned Fundamentals of Quantum Machine Learning and its applications in Medical Imaging. Applied Quantum computing principles in Image Processing. Implemented Variational Quantum Circuits for medical imaging classification. Explored Hybrid Quantum Classical Models for enhanced diagnostic accuracy. This Course gave me some practical experience with PennyLane, Qiskit and Tensorflow Quantum.
- **Foundations of Cybersecurity : google** (*Issued: Mar 11 2024*)
I completed the Foundations of Cybersecurity course by Google, gaining a strong understanding of cybersecurity principles, threats, and best practices. The course covered key topics such as network security, encryption, risk management, and incident response, providing insights into securing digital systems against cyber threats. I also learned about security frameworks, ethical hacking basics, and vulnerability assessment, enhancing my ability to identify and mitigate potential risks. This certification strengthens my knowledge of secure application development and data protection, ensuring better security practices in my projects.
