Ongole, Andhra Pradesh - 523001, India

OBJECTIVE

Backend Developer with expertise in building scalable APIs and microservices using Node.js, Rust (Axum). Proficient in designing event-driven architectures, integrating cloud services (AWS), and working with databases like MongoDB, Dynamo Db, SQL, and Redis. Skilled in developing robust backend systems with a focus on performance, reliability, and clean architecture, leveraging tools like Docker and GitHub Actions for CI/CD pipelines. Strong foundation in Data Structures Algorithms (DSA) for crafting optimized backend solutions, along with a good understanding of front-end technologies like React.

EXPERIENCE

- **Tiny Pal** 07-2025 - Present
Software Engineer Remote
 - Working as Back-End developer and also work on small devops tasks like creating the pipelines for back-end systems and managing docker applications , Creating API's from scratch , designing database schema's and also managing EC2 instances.
 - Developing Subscriptions using razor pay and designing new features based on requirement.
- **TeCell** 06-2025 - 07-2025
Software Engineer - Intern Bangalore, India
 - Worked as a backend developer focusing on building scalable systems using event-driven architecture, leveraging AWS services such as SQS, SNS, SES, and DynamoDB to design loosely coupled and highly available components.
 - Developed and maintained AWS Lambda functions triggered by events from SQS, EventBridge, and DynamoDB Streams to automate backend workflows and ensure real-time data processing in a serverless environment.
 - Designed and implemented robust CRUD operations on DynamoDB with efficient indexing and query patterns, supporting high-throughput applications with consistent performance.
 - Containerized backend services using Docker to ensure consistent development and deployment environments, simplifying the CI/CD pipeline and increasing development velocity.
 - Integrated AWS CloudWatch for logging and monitoring, enabling traceable log analysis and timely debugging of distributed microservices and asynchronous event triggers.
 - Used AWS SES for transactional email delivery and notifications, enhancing system reliability and improving communication with end-users.
 - AWS Lambda, DynamoDB, SQS, SNS, SES, EventBridge, Docker, CloudWatch, Serverless Architecture, RESTful APIs, Git.

EDUCATION

- **Amrita School Of Computing** 09-2021 - 06-2025
Artificial Intelligence and Machine Learning Kollam, India
 - * GPA: 6.2/10.0
- **Narayana junior college** 06-2019 - 07-2021
Intermediate Ongole, India
 - * Grade: 93%
- **Narayana High School** 03 2019
Secondary Education Ongole, India
 - * GPA: 9.8/10

PROJECTS

◦

SnipSight - A Microservice-based Secure File and URL Management Platform

June 2025 - Present

Tools: Rust (Axum), JavaScript, Docker, GitHub Actions, Aws Services

- * Designed and developed a scalable microservice application, SnipSight, for secure URL shortening and file sharing with rich analytics, built using Rust (Axum) and JavaScript.
- * Architected the Authentication Service, API Gateway, and URL Shortener entirely in Rust, ensuring strong type safety, performance, and modularity.
- * Built secure file sharing and public file hosting capabilities with in-depth file access analytics using RUST and integrated payment processing service with JavaScript.
- * Implemented gRPC for efficient and strongly typed inter-service communication, enabling low-latency interaction across microservices.
- * Adopted event-driven architecture using AWS SQS, SNS, SES, and EventBridge to decouple services, enable asynchronous workflows, and handle events like user sign-up, premium purchases, and scheduled email notifications.
- * Leveraged AWS Lambda functions to process background tasks like analytics storage and email dispatch, reducing backend load and improving responsiveness.
- * Used Amazon DynamoDB for storing real-time analytics (IP address, device type, geolocation, referrer), triggered via event-based logging mechanisms.
- * Established CI/CD pipelines with GitHub Actions for automated testing, Docker image builds, and deployment workflows, with images published to AWS ECR and deployed on EC2 instances.
- * Utilized Docker to containerize individual services and managed their deployment lifecycle via Docker Compose and orchestration on AWS EC2.
- * Successfully completed development of the Authentication Service, URL Shortener, and API Gateway; remaining services are in active development following modular microservice patterns.

◦

Ipl Auction Replica App

March 2025 - present

Tools: React, Rust Axum, PostgreSQL, Redis, Postman

- * Developing a real-time auction platform enabling users to create private IPL-style bidding rooms and manage unique team selections.
- * Integrated WebSocket connections using Axum to facilitate real-time bidding, player updates, and interactive room coordination.
- * Implementing WebRTC for live video transmission, allowing participants to communicate visually during live auctions.
- * Designing a responsive front-end using React to support dynamic room interactions, team assignment, and smooth user experience.
- * Utilized PostgreSQL for persistent storage of users, teams, auction settings, and bidding history.
- * Leveraged Redis to manage transient in-memory state, including participant purse, player counts, and live bid tracking for performance optimization.
- * And also using Docker along with ECR which helps in CI/CD pipeline such that if any changes were made automatically rebuilding the image and pushing to ECR and then pulling in the aws EC2 instance.

SKILLS

- **Programming Languages:** Go, Rust, Java Script
- **Web Technologies:** React js, tailwind css, node js, Axum, Express js
- **Database Systems:** Mongo Db, PSQL, Redis, Cassandra, Dynamo DB
- **Cloud Technologies:** Aws Ec2, RDS, Dynamo db, SQS, Lambda, SNS, SES, ECR
- **DevOps & Version Control:** Docker, git and git hub and Creating CI/CD pipelines using github actions
- **Specialized Area:** Creating Secure and reliable back-end application from scratch to deploying it on the Cloud by creating CI/CD pipelines through git hub actions.
- **Other Tools & Technologies:** Postman

SOCIAL INITIATIVES

◦

Enlightenment of Solar Energy in Farming Fields

Team Member | SSR Project

2023

- * **Organized a campaign to educate farmers about solar energy benefits for agriculture, reducing dependency on government-supplied electricity.**
- * **Advised farmers on cost efficiency and government subsidies for solar adoption, improving accessibility to sustainable energy.**

- * Collaborated with a 5-member team to conduct workshops, impacting 50+ farmers across rural villages.

o

AI Awareness Program for School Students

Team Member | SSR Project

2023

- * Conducted workshops for 80+ students on AI fundamentals, applications, and societal impact, fostering interest in emerging technologies.
- * Designed interactive modules to explain AI ethics, career opportunities, and hands-on demos (e.g., chatbots, image recognition).
- * Partnered with a 5-member team to deliver engaging sessions, simplifying complex AI concepts for students.

ADDITIONAL INFORMATION

Languages: Telugu (expert), English (Upper Intermediate)

Interests: Playing & watching Cricket, Watching Movies, Learning new things and Exercise
